

Name- Tanaya Koiri

ID- 1620404012

Part 1 | Ans 1

OFFSET operator returns the offset of a memory location relative to the beginning of the segment to which the location belongs:

MOV BX, OFFSET var; Load  
offset  
address

⊗ LDBA is just a shift-and-add instruction. It was probably added to 8086 because the hardware is already to do a one-operand addressing mode.
